#Synod2018

Concreteness means an anthropological vision of the person as a totality and a way of knowing that does not separate any links but connects them. It learns from experience by re-reading it in the light of the Word. It is inspired by exemplary witnesses rather than by abstract models... This approach is very much in line with the Christian vision which contemplates in the **incarnation of the Son** the inseparable meeting of the divine and of the human, of the earth and of the heaven.

*Synod on Youth, Final document 157*
